Aid for Trade in Action: Supporting the transition to clean energy

Trade and investment are essential for economic growth and job creation. Trade and investment can also play a key role in supporting the transition to clean energy. Trade and investment can help to reduce the cost of clean energy technologies, increase the availability of clean energy, and create new jobs in the clean energy sector. Trade and investment can also help to attract foreign investment in clean energy projects and to support the development of clean energy infrastructure. Trade and investment can also help to reduce the carbon footprint of countries and to support the achievement of the Sustainable Development Goals.
